Tips for clean hands:

Wash your hands with soap and water for at least 20 seconds. You should clean all parts of your hands and fists.

Always wash your hands:

- » before starting your workday
- » during breaks
- » after removing gloves,
- » before and after meals
- » when you get home
- » after coughing or sneezing
- » after touching objects that are used a lot (banister, door handle, bus or subway handle).

You can also use 70% alcohol to clean your hands. But remember it is not as effective as washing your hands with soap and water and may not work if your hands are too dirty or greasy.
